

Arindam Langer

+91-7006395984 | arindamlanger@gmail.com | linkedin.com/in/arindam-langer | github.com/Arindam-Langer

TECHNICAL SKILLS

Languages: Go, JavaScript, Python, C, SQL

Frameworks & Libraries: Node.js, Express.js, React, Flask, LangChainGo, Bubble Tea, gRPC

Databases & Queues: PostgreSQL, pgvector, MongoDB, Redis, BullMQ

AI & ML: Ollama, OpenAI API, Deepgram, Google Gemini, RAG Pipelines

DevOps & Tools: Docker, Kubernetes, AWS S3, FFmpeg, Git, Linux

EXPERIENCE

Software Development Intern

August 2025 – Present

OnClick Innovations

Mohali, India

- Built 4 production AI video generation pipelines (UGC, Veo, Template) orchestrating Google Gemini, HeyGen, ElevenLabs, and Google Veo – cutting ad production time from hours to minutes.
- Architected an async job queue with **BullMQ** and **Redis** to handle concurrent AI workloads, with retry logic, per-job progress tracking, and credit metering across **5+ providers**.
- Engineered a template management system with RBAC publishing, tag/category search, B-roll upload, and a questionnaire-driven creation flow – primary UX surface of the platform.
- Delivered a Live Ambient Scribe POC in **3 days**: real-time audio capture via Deepgram streamed to OpenAI for live SOAP note and differential diagnosis generation.
- **Tech Stack:** Node.js, Express.js, React, Python, Flask, Redis, BullMQ, FFmpeg, Docker, OpenAI, Deepgram, AWS S3

Backend Developer Intern

March 2025 – August 2025

Resolyte

Jammu, India

- Designed a high-performance query engine microservice from scratch in **Go** and **PostgreSQL**, consumed by **3+ downstream services**.
- Developed dynamic SQL generation with Squirrel and exposed type-safe **gRPC** APIs for inter-service communication across a distributed system.
- Containerized with **Docker** and deployed on **Kubernetes** with CI/CD integration, achieving **zero-downtime rollouts**.
- **Tech Stack:** Go, PostgreSQL, gRPC, Docker, Kubernetes, Squirrel

PROJECTS

Authn-service - Authentication Microservice | *Go, PostgreSQL, Redis, Docker*

[GitHub](#)

- Implemented a **6-endpoint** auth microservice in Go with JWT access tokens, 7-day rotating refresh tokens, bcrypt hashing, and UUID v5 phone anonymization – zero raw PII stored.
- Added token rotation with reuse detection, so a single replayed token instantly revokes every active session for that user via a Redis blocklist.
- Sustained a throughput of **11,000 requests/sec** on the core middleware path and **1,500 requests/sec** on the JWT verification hot path during end-to-end load testing, while keeping **99% of responses under 15ms** and 75ms respectively.

OllamaChat - Privacy-First RAG Engine with TUI | *Go, pgvector, Ollama, Docker, Bubble Tea*

[GitHub](#)

- Constructed a fully offline RAG pipeline in Go: PDF ingestion, overlap-aware chunking, **768-dim** vector embeddings via Ollama, and cosine-similarity retrieval from a Dockerized pgvector store.
- Designed a terminal UI in Bubble Tea (Elm architecture) with streaming chat, multi-line input, and a file browser – **zero external API calls**, complete data privacy.

AI Assistant for Farmers | *Python, Flask, LangChain, Ollama*

[GitHub](#)

- Developed a multimodal AI chatbot for plant disease diagnosis from image and text inputs, fine-tuned Llama3 with RAG using LangChain and Chroma for agriculture-specific retrieval.
- Integrated feedback loops and real-time data retrieval to iteratively improve response accuracy and usability.

EDUCATION

Central University of Jammu

Nov. 2022 – Aug. 2026

BTech in Computer Science and Engineering, Final CGPA: 7.6/10

Jammu, India
